                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel expression vector comprising an nEGFP reporter gene linked downstream of a HIV long terminal repeat (LTR) where a Rev protein nucleolus transfer signal is linked downstream of the reporter gene. The vector of the invention may be useful for infecting a cell with HIV-1 and measuring the infectivity of HIV-1 in a cell, as well as for producing HIV-1 clones, which in turn may be useful for anti-HIV strategies such as vaccine development. The current sequence is that of the HIV-1 Rev NLS (-) oligonucleotide of the invention which is related to HIV-1 Rev protein nucleolus transfer signal peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel expression vector comprising nEGFP reporter gene linked downstream of HIV-long terminal repeat, and a Rev protein nucleolus transfer signal is linked downstream of reporter gene.

The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010—ABC99999, ABP00010-ABF99989, ABH00010-ABF99989 and ABI00010-ABI82073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at

         This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010 ABC99889, ABF00010-ABF99989, ABH00010-ABH99989 and ABI00010-ABH82073

The present invention describes nucleic acids (A) that interact stably CC with a target sequence and contain at least one phosphoro(di)thioate CC link, having endonuclease activity. (A), and more generally any catalytic CC nucleic acid (A') that modulates expression of the oestrogen receptor CC in vivo or by transforming cells ex vivo and implanting treated cells, or CC for other conditions associated with levels of oestrogen receptor. CC Because of the high selectivity for targeted RNA, (A) can also be used to CC correlate inhibition of gene expression with alterations in phenotype, CC particularly for identification of therapeutic targets, and as research CC reagents (for RNA, in the same way that restriction endonucleases are CC used with DNA). The combination of modifications in (A) improves CC resistence to nucleases, binding affinity and/or activity. AAA23503 to AAA24747 represent oestrogen receptor hammerhead ribozyme sequences, and AAA2593 to AAA25992 represent their corresponding target sequences. CC AAA2474 b to AAA25992 represent toestrogen receptor hairpin ribozyme sequences. AAA2610 to AAA26218 represent other ribozyme sequences and CC Sequences. AAA2619 to AAA26211 represent other ribozyme sequences and CC antisense oligonucleotides used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 57

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                              The present invention relates to a method for analysing genetic predisposition to an autoimmune disease. The method comprises producing at least one amplification product from a polymorphic region associated with the disease, and testing it for hybridisation to probes specific fo susceptibility, resistance and neutrality. The method is used to determine susceptibility to insulin-dependent diabetes, but can also be applied to rheumatoid arthritis, anhylosing spondylitis, lupus and scleroderma. The present sequence is a probe for HIA (human leukocyte antigen) DQB1 gene detection. The HIA-DQB1 gene is known to be associate with insulin-dependent diabetes.
                                                                                               Sequence
                                                                                                                                                                                                                                                                                  Assessing genetic predisposition to autoimmune diseases, specifically type I diabetes, by detecting polymorphisms associated with susceptibility, resistance or neutrality.
                                                                                                                                                                                                                                                          Claim 10; Page 43; 57pp; French.

The HCV sequence was screened for optimal ribozyme target sites using a computer folding algorithm and regions of the mRNA which did not form secondary folding structures and contained potential ribozyme cleavage sites were identified. Ribozymes were synthesised to target these sites and their activities optimised by either varying the length of the binding arms or by modification to prevent degradation by nucleases. The ribozymes of the invention inhibit gene expression and/or viral replication, and are used to treat diseases associated with Hepatitis C virus (HCV) infection, e.g. cirrhosis, liver failure and hepatocellular carcinoma. The ribozymes may be used in combination with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel ribozymes for the treatment hepatitis C infection.

The HCV ribozymes are useful for modulating the expression and/or replication of HCV. They can be used to treat cirrhosis, liver failure and/or hepatocellular carcinoma. The HCV infection in conjunction with one or more other drug therapies, particularly type I interferon, especially interferon alpha, beta or gamma or consensus interferon. The present sequence represents a substrate for a HCV hammerhead (HH) ribozyme. Note: some of the sequence data for this patent did not form part of the printed specification. The complete sequence data for this patent was obtained in electronic format directly from the USPTO web site at

These probes were used to screen sequences amplified from the DQB1 gene second exon sequence. This method could be use to identify new DQB1 alleles. This method provides a simple, rapid and precise system for DQB1 typing, including those alleles which cannot be distinguished by serological methods. The presence or absence of a particular HLA DQB1 allele serves as an indicator of susceptibility to insulin-dependent diabetes mellitus organ transplantation and in the study of the molecular basis of disease susceptibility. Moreover, samples from unusual sources, eg ancient DNA or forensic samples, can be typed, even when the DNA sample is degraded or only present in an small amount.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequences given in AAQ26442-57 are probes which were used within the scope of the invention to type class II HAA DQBI alleles. These probes were used to screen sequences amplified from the DQBI gene second exon sequence. This method could be use to identify new DQBI select. This method provides a simple, rapid and precise system for DQBI typing, including those alleles which cannot be distinguished by serological methods. The presence or absence of a particular HAA DQBI allele serves as an indicator of susceptibility to insulin-dependent diabetes mellitus (IDDM). Accurate DQ typing is particularly important in the field of organ transplantation and in the study of the molecular basis of disease susceptibility. Moreover, samples from unusual sources, eg. ancient DNA or forensic samples, can be typed, even when the DNA sample is degraded or only present in an small amount. (Updated on 25-MAR-2003 to correct PA in the study of the molecular basis of disease states and the sample of the molecular basis of disease susceptibility. Moreover, samples from unusual sources, eg. ancient DNA or forensic samples, can be typed, even when the DNA sample is degraded or only present in an small amount. (Updated on 25-MAR-2003 to correct PN in the study of the molecular basis of disease states and the sample is degraded or only present in an small amount.

The method is useful for judging HLA genotypes of individuals by determining immunogenetic differences before transplanting between them, providing genetic information to decide compatibility of organ and tissue for transplantation e.g. of bone marrow, kidney, liver, pancreas, Langerhans islet in pancreas and cornea, susceptibility diagnosis of genetic diseases and identifying individuals
                                                                                                                                                                                Novel isolated human testis expressed Patched like protein (HTPL), useful for identifying agonist and antagonist and specific binding partners, and for treating subjects having defects in HTPL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; gene therapy; tumour suppressor; HTPL; chromosome 10p12.1; human testis expressed Patched like protein; testis; adrenal; liv. male germ cell development; bone marrow; brain; kidney; lung; plap prostate; skeletal muscle; colon; male infertility; cancer; ss.
  The present invention relates to human testis expressed Patched 1 protein (HTPL, see ABV78759 to ABU78752 and ABB98519 to ABB98520) has two isoforms, with a few single base pair differences between two. One of the single base pair changes introduces a premature s

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ct has two isoforms, with a few single base pair differences between the Ct two. One of the single base pair changes introduces a premature stop codon in HTPL-S (S for short) compared to HTPL-I (L for long). HTPL CS shares an overall structure organisation with the Patched protein. The Stares an overall structure strongly imply that HTPL plays a role similar to that of Patched, and is a potential tumour suppressor. HTPL is compared to the regulating male germ cell development, and the HTPL gene was mapped to human chromosome 10p12.1. HTPL and its coding sequence are cuseful for diagnosing a disorder caused by mutation in HTPL, and in therapy and manufacture of a medicament for treatment or prevention of cottal function such disorders include disorders of testis, or adrenal, adult and the HTPL. Such disorders include disorders of testis, or adrenal, adult and content of the protein such nucleic acids are clinically useful diagnostic markers and potenial therapeutic agents for male infertility and cancer. The present oligonucleotide was used in an examine from the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The present invention relates to human testis expressed Patched like CC protein (HTPL, see ABV78759 to ABB78750). HTPL CC has two isoforms, with a few single base pair differences between the CC two. One of the single base pair changes introduces a premeture stop CC codon in HTPL-S (S for short) compared to HTPL-L (L for long). HTPL CC shares an overall structure organisation with the Patched protein. The CC shared structural features strongly imply that HTPL plays a role similar CC important in regulating male germ cell development, and the HTPL gene was CC mapped to human chromosome lopl2.1. HTPL and its coding sequence are CC useful for diagnosing a disorder caused by mutation in HTPL, and in CC therapy and manufacture of a medicament for treatment or prevention of CC such disorder associated with decreased expression or activity of human CT Such disorders include disorders of testis, or adrenal, adult and CC skeletal muscle or colon function. HTPL proteins and nucleic acids are CC clinically useful diagnostic markers and potenial therapeutic agents for male infertility and cancer. The present oligonucleotide was used in an CC example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to human testis expressed Patched like CC protein (HTPL, see ABV78759 to ABV78752 and ABB98519 to ABB98520). HTPL CC has two isoforms, with a few single base pair differences between the CC two. One of the single base pair changes introduces a premature stop CC codon in HTPL-S (S for short) compared to HTPL-L (L for long). HTPL CC shares an overall structure organisation with the Patched protein. The CC shared structural features strongly imply that HTPL plays a role similar CC important in regulating male germ cell development, and the HTPL is important in regulating male germ cell development, and the HTPL gene was CC mapped to human chromosome 10p12.1. HTPL and its coding sequence are useful for diagnosing a disorder caused by mutation in HTPL, and in CC therapy and manufacture of a medicament for treatment or prevention of CC such disorders include disorders of testis, or adrenal, adult and CC foetal liver, bone marrow, brain, kidney, lung, placenta, prostate, skeletal muscle or colon function. HTPL proteins and nucleic acids are CC linically useful diagnostic markers and potenial therapeutic agents for male infertility and cancer. The present oligonucleotide was used in an CC example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to human testis expressed Patched like CC protein (HTPPL, see ABV78759 to ABB78520). HTPL CC has two isoforms, with a few single base pair differences between the CC two. One of the single base pair changes introduces a premature stop CC codon in HTPL-S (S for short) compared to HTPL-L (L for long). HTPL CC shares an overall structure organisation with the Patched protein. The CC shared structural features strongly imply that HTPL plays a role similar to that of Patched, and is a potential tumour suppressor. HTPL is compared to human chromosome 10p12.1. HTPL and its coding sequence are useful for diagnosing a disorder caused by mutation in HTPL, and in CC therapy and manufacture of a medicament for treatment or prevention of such disorder associated with decreased expression or activity of human CHTPL. Such disorders include disorders of testis, or adrenal, adult and CC foetal liver, bone marrow, brain, kidney, lung, placenta, prostate, CC skeletal muscle or colon function. HTPL proteins and nucleic acids are CC linically useful diagnostic markers and potenial therapeutic agants for male infertility and cancer. The present oligonucleotide was used in an CC example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Weber syndrome, Kippel-Trenaumay-Reber syndrome, Osler-Weber-rendu CC syndrome, leukaemia, osteoporosis and wound healing. (I) is useful for treating a patient having a condition associated with the level of ERG, CC by contacting cells of the patient with (I) under conditions suitable for the treatment. The method comprises the use of one or more therapies CC under conditions suitable for the treatment. Leukaemia or tumour CC angiogenesis is treated by administering (I) to the patient in CC conjunction with one or more of other therapies such as radiation or CC chemotherapy treatment. (I) is useful for reducing ERG activity in a CC cell, by contacting the cell with (I). (I) is useful for cleaving RNA of CC ERG gene, by contacting (I) with RNA, in the presence of a divalent CC diseases related to the expression of ERG, and as diagnostic tool to examine genetic drift and mutations within diseased cells or to detect the presence of ERG RNA in a cell. (I) is useful for specifically CC targeting genes that share homology with ERG gene or ERG fusion genes. CR ABK17354-ABK2719 represent nucleic acids, including antisense and CC crelated PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local Similarity Matches 13; Conserv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for treating cancer, diabetic retinopathy, macular degeneration, arthritis, psoriasis, verruca vulgaris and Sturge Weber syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                         tumour angiogenesis; diabetic retinopathy; macular degeneration; neovascular glaucoma; myopic degeneration; arthritis; verruca vulgaris; angiofibroma of tuberous selerosis; port-wine stain; wound healing; Sturge Weber syndrome; Kippel-Trenaunay-Weber syndrome; leukaemia; 88;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neovascular glaucoma, myopic degeneration, arthritis, psoriasis, verruca vulgaris, angiofibroma of tuberous sclerosis, port-wine stains, Sturge

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC Weber syndrome, Kippel-Trenauray-Weber syndrome, Osler-Weber-rendu (CC syndrome, leukaemia, osteoporosis and wound healing. (I) is useful for treating a patient having a condition associated with the level of ERG, by contacting cells of the patient with (I) under conditions suitable for the treatment. The method comprises the use of one or more therapies under conditions suitable for the treatment. Leukaemia or tumour angiogenesis is treated by administering (I) to the patient in conjunction with one or more of other therapies such as radiation or conjunction with one or more of other therapies such as radiation or chemotherapy treatment. (I) is useful for reducing ERG activity in a cell, by contacting the cell with (I). (I) is useful for cleaving RNA of ERG gene, by contacting (I) with RNA, in the presence of a divalent cation such as Mg2+. (I) is useful for diagnosis of conditions and diseases related to the expression of ERG, and as diagnostic tool to examine genetic drift and mutations within diseased cells or to detect the presence of ERG RNA in a cell. (I) is useful for SRG fusion genes. ```
cc protein 1 (POSHL 1) polypeptide (I), comprising a sequence of 730 amino CC (S1) having 95% deviations, especially conservative substitutions or a CC fragment of the sequences comprising at least 8 contiguous amino acids. CC Human POSHL 1 is a proto-oncogene/oncogene product that functions as an CC adaptor protein that interacts with Rho family small GTPases as well as CC downstream components of the signal transduction pathway. (I) is useful CC for identifying a specific binding partner. (I) and nucleic acids (II) CC caused by altered expression of human POSHL1 including diagnosing and CC treating cancer, they useful in the development of vaccines and (II) is useful in gene therapy. (II) is useful for constructing microarrays which are useful for measuring and for surveying gene expression and creating CC are useful for measuring and for surveying gene expression and creating CC transgenic non-human animals capable of producing the proteins. The present sequence is that of a scanning oligonuclectide useful in examples CC of the invention. Note: The present sequence did not form part of the CC Derwent by the European Patent Office

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated SH3 domain (POSH)-like signalling protein 1 (POSHI 1) polypeptide (I), comprising a sequence of 730 amino acids (S1, ABB8399), a sequence having 55% sequence identity to (S1), (S1) having 95% deviations, especially conservative substitutions or a fragment of the sequences comprising at least 8 contiguous amino acids. Human POSHI 1 is a proto-oncogene/oncogene product that functions as an adaptor protein that interacts with Rho family small GTPases as well as downstream components of the signal transduction pathway. (I) is useful for identifying a specific binding partner. (I) and nucleic acids (II) encoding (I) are useful for diagnosing monitoring disease and treating caused by altered expression of human POSHII including diagnosing and treating cancer, they useful in the development of vaccines and (II) is useful for constructing microarrays which are useful for man protein for man protein protein for man p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-JAN-2001;

                                           Human POSHL1 scanning oligonucleotide SEQ ID NO 105.
                                                                                                                                                                                                                                                                                                                                                                                                 are useful for measuring and for surveying gene expression and creating transgenic non-human animals capable of producing the proteins. The present sequence is that of a scanning oligonuclectide useful in examples of the invention. Note: The present sequence did not form part of the printed specification, but is based on sequence information supplied to berwent by the European Patent Office

The invention relates to an isolated SH3 domain (POSH)-like signalling CC protein 1 (POSHL 1) polypeptide (I), comprising a sequence of 730 amino CC acids (SI, ABB3999), a sequence having 65% sequence identity to (SI), CC (SI) having 95% deviations, especially conservative substitutions or a creater of the sequences comprising at least 8 contiguous amino acids. CC Human POSHL 1 is a proto-oncogene/oncogene product that functions as an CC adaptor protein that interacts with Rho family small GTPases as well as CC downstream components of the signal transduction pathway. (I) is useful for identifying a specific binding partner. (I) and nucleic acids (II) cencoding (I) are useful for diagnosing, monitoring disease and treating caused by altered expression of human POSHL1 including diagnosing and CC treating cancer, they useful in the development of vaccines and (II) is useful for measuring and for surveying gene expression and creating creater useful for measuring and for surveying gene expression and creating transgenic non-human animals capable of producing the proteins. The present sequence is that of a scanning oligonucleotide useful in examples of the invention. Note: The present sequence did not form part of the printed specification, but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                         Matches
                                                                                                                                                                      Query Match

                                                                                                                                                                     The invention relates to an isolated SH3 domain (POSH)-like signalling CC protein 1 (POSHL 1) polypeptide (I), comprising a sequence of 730 amino CC acids (S1, ABB3999), a sequence having 65% sequence identity to (S1), CC (S1) having 95% deviations, especially conservative substitutions or a CC fragment of the sequences comprising at least 8 contiguous amino acids. CC Human POSHL 1 is a proto-oncogene/oncogene product that functions as an CC downstream components of the signal transduction pathway. (I) is useful for identifying a specific binding parrener. (I) and nucleic acids (II) CC encoding (I) are useful for diagnosing, monitoring disease and treating CC caused by altered expression of human POSHL1 including diagnosing and CC treating cancer, they useful in the development of vaccines and (II) is useful in gene therapy. (II) is useful for constructing microarrays which CC are useful for measuring and for surveying gene expression and creating transgenic non-human animals capable of producing the proteins. The CC present sequence is that of a scanning oligonucleotide useful in examples CC of the invention. Note: The present sequence did not form part of the CC printed specification, but is based on sequence information supplied to CC Derwent by the European Patent Office
                                                                  Query Match 4.1%;
